

EasySave User Guide

EasySave is backup software (max. 5 jobs) usable via an interactive menu or command line.

Startup

- Language: At launch, choose fr (French) or en (English).
- Navigation: Follow the on-screen instructions.

Main Menu (Interactive Mode)

1. Click the green New button located at the top of the interface.

A form will open. Fill in the required fields:

- **Name:** The job name (e.g., *Backup_Photos*).
- **Source:** The full path of the folder to copy.
- **Destination:** The path of the reception folder.
- **Type:** Choose *Full* (copy everything) or *Differential* (modified files only).

2. Modify a Job

To change the settings of an existing backup:

1. Select the job row you wish to modify in the table.
2. Click the yellow **Edit** button.
3. Update the information in the window that appears.

3. Delete a Job

To remove a backup task from the list:

1. Select the specific job in the table.
2. Click the red **Delete** button.
3. The IDs of the remaining jobs are automatically reorganized (e.g., job 3 becomes job 2).

4. Execute a Job

Execution is performed via the dedicated execution view in the application. You can launch a specific job or run all jobs sequentially.

System Files

Files generated in the program folder (Do not delete jobs.json).

- jobs.json: Stores your configurations.
- state.json: Real-time status (Current file, Progress %, Remaining).
- settings.json : Store the current settings
